Abstract of **JP 2000347968 (A)**

PROBLEM TO BE SOLVED: To receive a message in a method that is optimum to a receiving client by selecting a distributing message according to the resources usable to the receiving client or selecting automatically the message component part to distribute the message and then converting automatically the distributing message into a receivable message form. SOLUTION: A server 1 includes a client usable resources collection means 8, an optimum distribution method analysis means 10 which analyzes the distributable message component part and the distribution form, a message conversion means 12 which converts a distributing message into a reference enable form and an optimum distribution contents message production means 13. In such a constitution, the message can be distributed in a form that is suitable to the resources usable to a client and the distribution contents can be notified in a message. Furthermore, the conversion of form is not required for an acquired message and then the reference unable messages can be decreased.
